

## Mount-ernized Classrooms

by Terrence Davis '08

In almost every classroom in America, there is always a chalkboard with notes and/or information for the students to copy. Nowadays, the chalkboard is considered a relic to the new smartboards seen all over the school. However, one certain room will be a model for others in the school. Mr. Guffey's room 301 will become a room that will be the most technological. A much cleaner white dry-erase board has replaced the generic chalkboard. The CEO of Staples is a Mount graduate and he donated the white boards that will be utilized in Mr. Guffey's room as well as a room in the Junior High. Soon the rooms will have mounted projectors that can be displayed on the white board in addition to the smartboards. The lucky recipient, Mr. Guffey said "I think it's great especially since it's in my room." Mr. Varuolo explained that the school is in the process of test the white boards. The project includes desktop computers in the classrooms and wall-mounted projectors. The project will be completed iin 2009. By that time, more classrooms may have whiteboards.
